Equality in American gender roles continues to evolve and dates back prior to the 1920s when women gained the right to vote in the United States. However, the time immediately after women's suffrage saw little progress in women's voting rights for various reasons such as the Great Depression and wars. But it was World War II (WWII) that saw women storming the workforce by working in factories to help on the home-front while men were shipped off overseas. After the war, however, stereotypical gender roles returned and dominated the then-new medium of television where women were largely depicted as stay-athome mothers. Scholars later indicate a tipping point that led to the downfall of traditional gender roles, the second wave of feminism, and the proposal of the Equal Rights Amendment to the US Congress.
